

FORENSICS

THE SCIENCE OF CRIME

DNA TECHNOLOGY

is now so advanced that we can tell the difference between identical twins.

EVEN WEARING LATEX GLOVES

won't stop you from leaving a fingerprint. Natural oils or dirt on the outside of the glove can still leave a print.

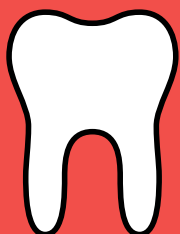

THE CHARGING HISTORY OF SMART PHONES can be tracked by the police. This was famously used in an Australian murder investigation to disprove a suspect's alibi.

IF A BODY IS TOO DECOMPOSED

for testing, forensic scientists can use the bugs found on the body to test for drugs or alcohol in the victim.

DENTAL RECORDS

are used to identify 93% of skeletal remains.
